About the exam and my grade

First and foremost, I cannot seem to access my exam number on “digital exam” as it requires a pin and the exam does not show up anymore on selvbetjening, so I am sorry if this is for nothing, but I believe that I had number 22, and my ku-id is ghp118

In Problem 1, I believe I should receive approximately 40–55 out of 60 points. I identified that mathematical induction was required, including base cases, and attempted induction hypotheses and induction steps for both subproblems. According to the grading guidelines, correct setup of induction, correct base cases, and partially correct induction steps should receive substantial partial credit even if the proofs are incomplete or contain mistakes.

In 4, I cannot tell you if I correctly rewrote the tables correctly as it is some time ago, but in problem 4b, I believe I should receive approximately 5-15 out of 30 points. I correctly identified that the formula was not a tautology, which the rubric explicitly awards points for. Even if my, falsifying assignment or correction was incomplete, the central logical observation was correct.

In Problem 5a, I believe I should receive approximately 20, because of the min heap I made, that I believe was correct.

In Problem 6a, I believe I should receive approximately 10–20 out of 20 points. I correctly drew the tilings and obtained the correct number of tilings for the grid. According to the rubric, correctly listing the solutions and obtaining the correct numerical answer should receive significant partial credit even if the proof that there are no additional tilings is incomplete.

In Problem 9, I believe I should receive approximately 40–70 out of 120 points. I correctly identified approximately three out of the four graph algorithm sequences and provided partial explanations for some of them. According to the rubric, correct identifications without arguments already receive points, while additional partial explanations should increase the score further.

Based on these estimates, I believe my score could plausibly fall within approximately 115–180 points. I fully understand that only the upper end of this interval would correspond to a passing grade, and I may of course be overestimating some of my answers. However, since I have difficulty seeing how my score would fall below 100 points given the grading guidelines, I still wanted to reach out and ask.

I apologize if my assessment is completely mistaken and/or if this message ends up wasting your time.

Best regards,

Theodor Kristensen

Theodor **Theodor Kristensen**
